DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claim 7 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,603,835. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 1 of U.S. Patent No. 6,603,835 is the same as claim 7 of the present application except it does not specify a microphone, a speaker, a visually readable display, circuitry to support connection to two telephone lines and a microprocessor. However, the telephone station of claim 1 inherently includes a microphone and speaker in order to carry out a voice communication (col. 12, lines 4-9), the captioned telephone display of claim 1 inherently includes a visually readable display (col. 12, line 17) and circuitry to support connection to two telephone lines since claim 1 recites communication over first and second telephones (col. 12, lines 4-7). The use of a microprocessor in telephony devices is old and well known such that it would have been obvious to an artisan of ordinary skill to use a microprocessor to carry out the recited steps of claim 1.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Engelke et al. (US 5,974,116) shows a personal interpreter. Brunet et al. (US 5,995,590) converts speech received over the telephone line for display. August (US 5,787,148) and Duffin (US 5,991,723) show other text/speech relay services.
